

SSO and IAM Saves You Money

By Taking the Guesswork Out of Compliance

"Using software to automate compliance, particularly for the internal controls required by Section 404, is an opportunity to make the process more efficient, sustainable, and transparent. Forrester predicts that the majority of enterprises will adopt a technology-based approach to SOX (Sarbanes-Oxley) by '06."

- Forrester Research

By Increasing ROI

"Implementing a Single Sign-on (SSO) & Identity and Access Management (IAM) system within an organization with 10,000 users and 12 legacy applications stands to achieve a ROI of 295% over 3 years, saving \$3.5 million through reduction in application management costs."

-Gartner Group

Through Cutting Down on Help Desk Calls

"45% of total calls to the average help desk are for password reset assistance. SSO-IAM would result in a 33% reduction of help desk call volume, as well as a 32% increase in overall security, while providing a seamless user experience which leads to better cross-selling and improved productivity."

- Meta Group

Security from the Desktop to the Mainframe

Identiprise™ Suite from Secured Services

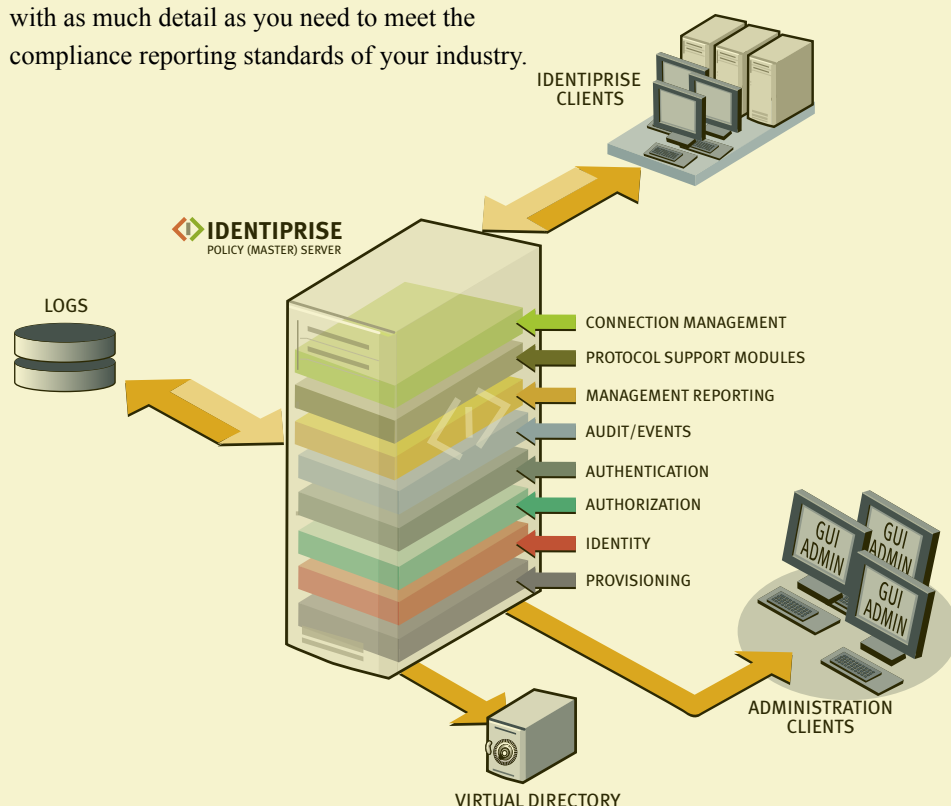

Computer users in today's business world want instant and hassle-free access to applications. Organizations need to find innovative ways to address this desire, and to:

- Maintain a secured networking environment.
- Comply with new or changing laws governing business.
- Reduce costs of application identity management and help desk interaction.

The Identiprise™ Suite is a comprehensive, non-intrusive, Single Sign-On (SSO) and Identity and Access Management (IAM) system. This powerful suite enables you to secure Web, client/server, and legacy applications your business needs every day.

Virtual Directory, a directory aggregation mechanism, allows Identiprise™ Server to be deployed over a wide range of directory and database repositories. Once deployed, your users have single sign-on to any application they are authorized to use that is protected by Identiprise™. Even better than that, password policies are automatically enforced without the user needing to remember to change anything.

The Identiprise™ Policy Engine uses service profiles which, taken in combination with a user's authentication credentials and management of the communication protocol, provide fine-grain access control to a requested resource. Delegated Administration and User Self Service, part of the Identiprise™ Suite, enables your employees to reset passwords and gain access to applications without requiring hours of IT effort to do so. Best of all, our integration team can use Identiprise™ to capture access requests with as much detail as you need to meet the compliance reporting standards of your industry.

Get Secure Fast and Save Money.

Speedy Deployments Reduce Costs

With the Identiprise™ Suite, you do not need an army of people and millions in the budget to implement an effective highly secure, solution.

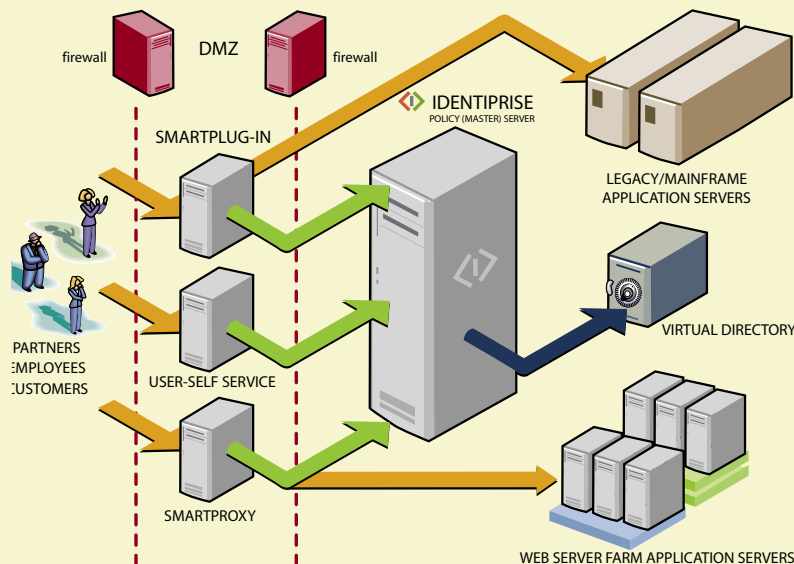

Rapid Deployment - Our shorter time-to-production than alternative solutions, saves you money.

Minimized Infrastructure and Code Infringement - Most applications can be secured without the need to modify or recompile legacy code.

Broad Platform Support - The Identiprise™ Suite works with all major server platforms, including UNIX, Linux, and Windows. The Identiprise Virtual Directory works with any LDAP or ODBC-based repository.

Auditing and Reporting - Continuous, detailed logging of access privileges and activities enables the creation of sophisticated enterprise-wide reports for security officers. Our Integration team is available to build custom reports to your requirements.

Taken together, these features of the Identiprise™ Suite make it easier for your organization to implement IT changes required by European Union trade directives, Sarbanes-Oxley, Gramm-Leach-Bliley and HIPAA regulations.

Authentication Methods

Passwords	Combination of
Two-factor tokens	methods
X.509 certificates	Forms-based
Passwords over SSL	Custom methods
Smart cards	RADIUS

Protocol Support Modules

TELNET, FTP	SMTP, NNTP
HTTP, HTTP-Proxy	IIOP, IIOPNS
Login (rlogin)	SMB NTFS
Shell (rsh)	IMAP4, LDAP
Exec (rexec)	Toolkit for custom
POP3, X11	development

Identiprise™ Suite Highlights

No changes needed to:

- Application Servers
- Web Applications
- Client/Server Applications
- Native Directory Services

User Self Service Provides:

- Dynamic User Registration
- Password Reset and Recovery
- Delegated Administration

Industry Standards are Supported:

- SAML and Federated Identity
- XML and SSL
- LDAP
- SPML
- SOAP/Web Services

Our Partners...

Bring More Value to You

Our Managed Service Provider partners allow Secured Services to offer Identiprise™ Suite, the "true enterprise-wide" identity and access management software, as on-demand computing. These partnerships make purchasing a SSO-IAM solution affordable for medium-sized companies.

If you can't justify the costs of owning, supporting, and staffing a security solution in-house, visit www.secured-services.com/Partners to learn about our Managed Service Provider partners
